# Carbon Footprint Report 2025

Company: Demo Company
Reporting year: 2025
Document reference: DEMO-CF-2025-01

## 1. Executive overview

Demo Company provides preliminary greenhouse-gas emissions information for the reporting period January 1 to December 31, 2025. The figures below are expressed in tonnes of CO2 equivalent (tCO2e). They are illustrative and have not been independently assured.

## 2. Emissions inventory

| Emission category | Reported emissions | Unit |
|---|---|---|
| Scope 1 - Direct emissions | 120 | tCO2e |
| Scope 2 - Purchased electricity | 80 | tCO2e |
| Scope 3 - Other indirect emissions | 15 | tCO2e |
| Declared total emissions | 250 | tCO2e |

The company explicitly declares total emissions of 250 tCO2e. The three reported scope figures are provided separately. No reconciliation schedule accompanies this document.

## 3. Scope descriptions

Scope 1: Direct fuel consumption associated with on-site operations and company-controlled vehicles. Reported Scope 1 emissions: 120 tCO2e.

Scope 2: Emissions from purchased electricity. Reported Scope 2 emissions: 80 tCO2e.

Scope 3: Other indirect emissions from the value chain. Reported Scope 3 emissions: 15 tCO2e. The completeness of Scope 3 category coverage is not confirmed.

# Methodology, limitations and review notes

## 4. Accounting boundaries

The inventory is presented for Demo Company in 2025. The detailed organizational boundary, inventory consolidation method and the allocation of individual facilities are not specified. Therefore, the relationship between reported scopes and the declared total should be reviewed before publication.

## 5. Methodological notes

Scope 2 is based on purchased electricity; however, the report does not specify whether the figure is location-based or market-based. The Scope 3 disclosure is presented as an aggregate and does not include a category-by-category breakdown. No third-party assurance statement is attached.

## 6. Requested audit checks

The reviewer should independently add the reported Scope 1, Scope 2 and Scope 3 figures and compare their sum with the declared total emissions. The reviewer should not assume that the inventory is complete or that any unexplained difference has a known cause.

The reviewer should also confirm whether the declared total includes additional emission sources or categories not itemized in the document. Any discrepancy must be reported as requiring reconciliation, rather than being silently corrected.

## 7. Data provenance

Source: Demo Company, synthetic carbon footprint reporting exercise, 2025. The table on page 1 contains the emission values supplied to the evaluation workflow. The methodological limitations on this page provide context for the analysis and final report.

Important: This is a fictional training document developed solely to test PDF parsing, evidence tracking, structured extraction, analysis and report writing. It does not describe a real company or constitute a certified emissions inventory.
